                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ij
                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 14, Application US/08077797A
Patent No. 5679548
GENERAL INFORMATION:
APPLICANT: Barbas, Carlos F.
APPLICANT: Rosenblum, Jonathan
APPLICANT: Lerner, Richard A.
TITLE OF INVENTION: METHODS FOR PRODUCING POLYPEPTIDE METAL
TITLE OF INVENTION: BINDING SITES AND COMPOSITIONS THEREOF
NUMBER OF SEQUENCES: 65
CORRESPONDENCE ADDRESS:

AAY79998 standard; Peptide; 25 AA. 15-MAY-2000) (first entry) AAY79998 AAY79998

Optimised IgE-CH3 domain antigen peptide for human IgE.

Immunoglobulin E; IgE; epsilon heavy chain; antigenic; antigen; immunogenic; immunostimulatory; carrier protein; helper T cell epitope; antibody; allergy; allergic disease; immunisation; anti-allergic; anti-asthmatic; asthma; anaphylaxis; dermathtis.

98US-0100287. 99WO-US13959. Homo sapiens. Synthetic. 21-JUN-1999; WO9967293-A1 20-JUN-1998; 29-DEC-1999.

(UNBI-) UNITED BIOMEDICAL INC. Wang CY, Walfield AM;

WPI; 2000-160578/14.

New antigenic peptide from the CH3 domain of immunoglobulin E, fusions for immunization against allergy $\mbox{\ \ -}$

                                                                                                                                                antigenic peptides (I). (I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies specific for a target effector site on the epsilon heavy chain of IgE, and so preventing triggering and activation of mast cells and basophils and soo preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermatitis. Nucletc acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. (conjugates of (I) that include a promiscuous Thelper cell epitope (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural target. They induce safe (non-anaphylactogenic) antibodies. AA779994 to AAX8004 represent amino caid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Promiscuous T-cell epitope; measles virus F protein; MVF; hepatitis B virus surface antigon; HBY, immunogenic; B-cell epitope; luteinising hormone releasing hormone; LHRH; contraceptive; anticancer; somatostatin; growth promotion; CD4 receptor; HIV-1; antiviral; FMDV; foot and mouth disease virus; immunoglobulin E; IgE; anti-allergic; Plasmodium falciparum; circumsporozoite; antimalarial; CETP; cholestery] ester transport protein; anti-arteriosclerotic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis

Intections (HIV, Toot-and-mouth disease or malaria); for cancer immunotherapy; for inhibition of the action of lutefinishing hormone releasing hormone (LHRH) for contraception, treatment of hormone—teacher and cancer, prevention of poar taint in meat, and the promise of the promotent cancer; prevention of poar taint in meat, and the promise of immunocastration); for promoting the growth of animals; or for immunocastration); for promoting the gubjects) into an immunogen of immunocastration of a promise of animal of the parameter of improves capacity to induce a strong T helper cell—mediated immune certificates, resulting in production of anithodies against a target aniquent of anithodies against a target aniquent of anithodies and pathogen-derived the head on the measules virus (HBV) protein and sequences ANY91121 represents a promiscuous T helper epitope from hepatitis B virus (HBV) brotein and sequences ANY91121 represents a promiscuous T helper certom hepatitis B virus (HBV) brotein and sequences ANY91125 regulated on the crown hepatitis B virus (HBV) surface antique. ANY91126 regulated and ANY9124 represents a promiscuous The pitope comprising an LHHH sequence joined to a promiscuous The pitope. ANY91197 registed anique sequence joined to a promiscuous The pitope. ANY91197 registed aniques in these LHHH target aniquent peptide used in these LHHH any petitope. ANY91201 somatostatin, and ANY91201-Y91207 are antiqenic peptides. ANY91201 somatostatin, and ANY91201-Y91207 are antiqenic peptides. ANY91201 somatostatin, and ANY91201-Y91207 are antiqenic peptides which may be used to prevent HIV infection of T cells. ANY90121 is a modified version of a human IgE (immunoglobulin E) CH3 domain, and ANY91220 are Th epitope. ANY91221 represent cantigenic peptides which may be used in the treatment of allerytes. ANY91221 and peptides and ANY91222-Y9124 are antigened or the ceptope and may be used in a malarial avaccine ANY9128 Fy91231 represent ceptope and may be used in a malarial avaccine ANY91212 and ANY91221 and are 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   epitope which may be used as a component in an anti-HIV-1 vaccine. AAY91198 and AAY91199 are respectively an immunostimulatory invasin protein epitope from Yersinia species, and hinge spacer peptide, both of which may optionally be used in the antigenic peptides of the
The invention relates to novel promiscuous T helper cell epitopes (Th), and immunogenic peptides comprising the Th epitopes of the invention along with B cell epitopes. The Th epitopes and peptide immunogens containing them, are used to induce a T helper cell response, specifically against Plasmodium falciparum, cholesteryl ester transport protein (CETP) or HIV epitopes, but more generally against any pathogen, immunogens may be used for prevention and/or treatment of peptide immunogens may be used for prevention and/or treatment of infections (HIV, foot-and-mouth disease or malaria); for cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The specification describes peptide immuncgens comprising a synthetic helper T cell (Th) epitope and a target antigen, luteinising hormone-releasing hormone (LHRH). The peptide immunogens cause hormone-releasing hormone (LHRH). The peptide immunogens cause induction of a specific immune response to LHRH which is involved in regulation of spermatogenesis, ovulation, oestrus, sexual development and secretion of sex hormones. Provision of a promiscous T helper epitope (which is functional in genetically diverse subjects) provides optimum immunogenicity to the B cell epitopes of the target antigen and thus high antibody titres against the target antigen. The peptide thus high antibody titres against the target antigen. The peptide for use as (reversible) contraceptive; control of hormone-dependent tumours (cancer of prostate or breast, also endometriosis); to prevent tumours (cancer of prostate or breast, also endometriosis); to prevent present sequence appears in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                  lutelnising hormone-releasing hormone; spurmatogenesis; ovulation; osstrus; sexual development; sex hormone; promiscuous T helper epitope; vaccine; contraceptive; hormone-dependent tumour; prostate cancer; breast cancer; endometriosis; boar taint; meat quality; immunocastration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   mammalian LHRH,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Immunoglobulin B; IqB; epsilon heavy chain: antigenic; antigen; immunogenic; immunostimulatory; carrier protein; helper T cell epitope; antibody; allergy; allergic disease; immunisation; anti-allergic; anti-anaphylactic; anti-asthmatic; asthmatic; dermatitis.

The present invention describes immunoglobulin E (IgE)-CH3 domain antiperaic peptides (I). (I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies and anti-asthmatic properties. (I) induces polyclonal antibodies specific for a target effector site on the epsilon heavy chain of IgE, and so preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermatitis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. Conjugates of (I) that include a promiscuous T helper cell epitope (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural target. They induce affer (non-anaphylactogenic) antibodies. RAY79994 to AAY80084 represent anino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immunogenic; immunostimulatory; carrier protein; helper T cell epitope; antibody; allergy; allergic disease; immunisation; anti-allergic; anti-anaphylactic; anti-asthmatic; asthma; anaphylaxis; dermatitis.
                                                                                                                                                                                                                                                                                                                                                                             New antigenic peptide from the CH3 domain of immunoglobulin E, fusions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The present invention describes immunoglobulin E (1gE)-CH3 domain antigenic peptides (I). (I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies and anti-asthmatic properties. (I) induces polyclonal antibodies and so preventing triggering and activation of mast cells and basophils and so preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermatitis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. Conjugates of (I) that include a promiscuous T helper cell epitope (incitonal in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disufide bridge) to stabilise conformational features and mainze cross-reactivity to the natural target. They induce safe (non-anaphylactogenic) antibodies. NAY79994 to NAY80084 represent amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Immunoglobulin E variants as peptide antagonists useful for raising and screening anti-immunoglobulin E (IgE) antibodies, in the isolation and purification of FcepsilonRI receptor and in the treatment of allergic

(I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies of antigenic peptides (I). (I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies specific for a target effector site on the epsilon heavy chain of IgE, and so preventing triggering and activation of mast cells and basophils and so preventing (I) are used for active immunisation against IgE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermatitis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. (In that include a promiscuous T helper cell epitope (functional in genetically diverse subjects), in addition to a B cell carget epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural target. They induce safe (non-anaphylactogenic) antibodies. AA779994 to AA800084 represent amino cit asequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel binding protein which specifically binds to native canine free or B-cell bound igB, and which doesn't bind to IgE when the IgE is bound to mast cells. The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound igE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.

AMY50876-Y50900 represent peptide mimotopes used in the method of the
and screening anti-IgE antibodies, in the isolation and purification of FcepsilonRI receptor and in the treatment and prophylaxis of allergic

                                                                                                                                                                                                                                                                                                     This invention describes a novel binding protein which specifically binds to native canine free or B-cell bound IgE, and which doesn't bind to IgE when the IgE is bound to mast cells. The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound IgE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.

surface exposed epitope of C epilon3 or C epsilon4 domain of IgE. The epitopes were identified by calculating the accessible surface of each IgE residue. Minotopes were designed to be similar to the epitopes. The epitopes are useful in preparing medicaments for treating or preventing allergies. The epitopes and minotopes of the invention induce anti-IgE antibodies which are capable of raising non-anaphylactic antibodies and inhibiting histamine release. The present sequence is an IgE C epsilon3/4 domain epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptides comprising surface exposed epitopes or mimotopes derived from C-epsilon-3 or C-epsilon-4.domains of IgE, useful for preventing or treating allergy -

                                                                                                                                                                                                                                                                                                               The present invention relates to linkage nethodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles

(e.g. macromolecules, polymers, dendrimers, proteins) to produce biological and immunological constructs. The invention provides a method for linking an epitope (e.g. a peptide) to a carrier (e.g. a protein) for use in a pharmaceutical composition or a vaccine. The protein for use in a pharmaceutical composition or a vaccine. The cinvention describes peptides derived from or mimotopes of the cepsilon3 or cepsilon4 regions of human immunoglobulin E (IgE) which are used to produce conjugated compounds. The compounds or compositions of the invention are useful in the manufacture of a medicament for the treatment of IgE mediated diseases. The invention allows for controlled conjugation of a peritide epitope (antigen) to a protective antibody response in ar animal or human patient. AAU16632-AAU16913 represent peptides derived from or mimotopes of the Cepsilon2/Cepsilon3/Cepsilon4 region of human 1gE.
                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                 A linkage comprising an immunogenic conjugate useful treatment of IgE mediated diseases .
                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The present invention relates to a composition comprising allergy peptides inked by an inert carrier. The allergy peptides are derived from Immunoglobulin E (19E) or IgE receptor. The present peptide is one such peptide from IgE. The composition is useful as a vaccine or for manufacturing a medicament for the prophylaxis or treatment of allergy. In particular, for boosting an anti-allergy immune response in an individual susceptible to an allergic response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptides comprising surface exposed epitopes or mimotopes derived from C-epsilon-3 or C-epsilon-4 domains of IgE, useful for preventing or treating allergy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
New vaccine comprising allergy peptides linked by an inert carrier, useful for boosting an anti-allergy immune response in an individual susceptible to an allergic response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        histamine release inhibitor; vaccine; human,

                            The present invention relates epitopes and mimotopes of an isolated surface exposed epitope of C epsilon3 or C epsilon4 domain of IgE. The epitopes were identified by calculating the accessible surface of each IgE residue. Mimotopes were designed to be similar to the epitopes. The epitopes are useful in preparing medicaments for treating or preventing allergies. The epitopes and mimotopes of the invention induce anti-IgE antibodies which are capable of raising non-anaphylactic antibodies and inhibiting histamine release. The present sequence is an IgE C epsilon3/4 domain mimotope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to linkage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles (e.g. macromolecules, polymers, dendrimers, proteins) to produce biological and immunological constructs. The invention provides a method for linking an epitope (e.g. a peptide) to a carrier (e.g. a protein) for use in a pharmaceutical composition or a vaccine. The invention describes peptides derived from or mimotopes of the cepsilons, Cepsilons or Cepsilons regions of human immunoglobulin E (IGE) which are used to produce conjugated compounds. The compounds or

compositions of the invention are useful in the manufacture of a medicoment for the treatment of IgE mediated diseases. The invention allows for controlled conjugation of a peptide epitope (antigan) to protein so as to form an immunogenic conjugate which may be able to raise a protective antibody response in an animal or human patient. AAU16632-AAU1613 represent peptides derived from or mimotopes of the Cepsilon2/Cepsilon3/Cepsilon4 region of human IgE.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Title: Purification and characterization of Atlantic salmon growth hormone and evidence
A; Title: purification and characterization of Atlantic salmon growth hormone and evidence
A; Reference number: A60621; MUID:91146880
A; Molecule type: protein
A; Residues: 1-25 <SKI>A; Note: this protein displayed charge heterogen; ity from variable levels of phosphorylat
C; Superfamily: prolactin
C; Keywords: hormone; phosphoprotein; pituitary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ó;

Frimary structure and biological activity of bradykinin potentiating peptides from Bothrops insularis snake venom.";
J. Protein Chem. 9:221-227(1990).
-!-FUNCTION: THIS PEPTIDE BOTH INHIBITS THE ACTIVITY OF THE ANGIOTENSIN CONVERTING ENZYME AND ENHANCES THE ACTIVITY OF THE BRADYKININ BY INHIBITING THE KINASES THAT INACTIVATE IT.
IT ACTS AS AN INDIRECT HYPOTENSIVE AGENT.

J. Protein Chem. 9:21-227(1990)
I. PROCTION: THIS PEPTIDE BOTH INHIBITS THE ACTIVITY OF THE ANGIOTENSIN-CONVERTING ENZYME AND ENHANCES THE ACTION OF BRADKININI BY INDIRECT HYPOTENSIVE AGENT.

IT ACTS AS AN INDIRECT HYPOTENSIVE AGENT.
PIR: H37196, H37196
                                                                                                                                                                                                                                                                                                                                                              Postsynaptic neurotoxin; Acetylcholine receptor inhibitor; Amidation; Hydroxylation; Venom; 3D-structure.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Willernate names: adhesive polyphenolic protein
C;Species: Mytilus californianus (California mussel)
C;Date: 31-Dec-1993 #sequence_revision 31-Dec-1993 #text_change 07-May-1999
C;Accession: A61093
R;Waite, J. H.
J. Comp. Physiol. B 156, 491-496, 1986
A;Title: Mussel glue from Mytilus californianus Conrad: a comparative study.
A;Reference number: A61093; MUD:86279063
A;Molecule type: protein
A;Residues: 1-20 <WAI>
A;Molecule type: protein
A;Note: the amino terminal residue was tentatively identified as Ser
A;Note: 12-Ser was also found
C;Comment: This glue protein is a component of the adhesive plaque of the byssus, the

Postsynaptic neurotoxin; Acetylcholine receptor inhibitor; Amidation;
Hydroxylation; Venom; 3D-structure.
         Biochemistry 36:1669-1677(1997).
-!- FUNCTION: ALPHA-CONOTOXINS ACT ON POSTSYNAPTIC MEMBRANES,
BIND TO THE NICOTINIC ACETYLCHOLINE RECEPTORS (NACHR) AND
INHIBIT THEM.
-!- SUBJUSTRY LOCATION: Secreted.
-!- SIMILARITY: BELONGS TO THE ALPHA-TYPE CONOTOXIN FAMILY.
PDB; 1P1P; 07-JUL-97.

"Primary structure and biological activity of bradykinin potentiating peptides from Bothrops insularis snake venom.";

J. Protein Chem. 9:221-227(1990).

-I. FUNCTION: THIS PEPTIDE BOTH INHIBITS THE ACTIVITY OF THE ANGIOTENSIN-CONVERTING ENZYME AND ENHANCES THE ACTION OF BRADXININ BY INHIBITING THE KINASES THAT INACTIVATE IT.

IT ACTS AS AN INDIRECT HYPOTENSIVE AGENT.

PIR; H37196; H37196.

I. Protein Chem. 9:221-227(1990)

I. PROTION: THIS PEPTIDE BOTH INHIBITS THE ACTIVITY OF THE ANGIOTENSIN-CONVERTING ENZYME AND ENHANCES THE ACTION OF BRADYKININI BY INDIRECT HYPOTENSIVE AGENT.

IT ACTS AS AN INDIRECT HYPOTENSIVE AGENT.
